Airhug Technology

The distribution of the air outlets offers an authentic 'air hugs' experience. The outlet design ensures the air covers as much of the hands as possible, and with the different sized outlets noise is minimised. The side outlets produce a 'curtain effect' preventing water spraying out of the drying chamber.

Laser Diagnostic

Quick and easy to maintain, the ffuuss has a unique silent alarm system integrated into the design that reflects a red laser dot onto the floor to indicate when the water tray requires emptying.

Highest Hygiene Standards

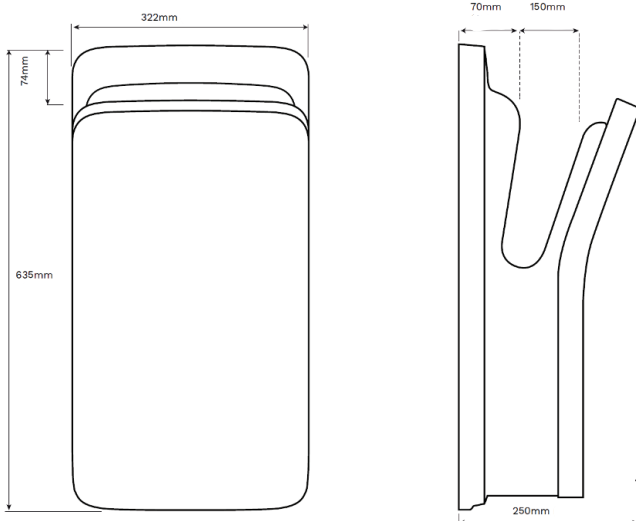

Equipped with high quality H13 HEPA filters that catch 99% of viruses and bacteria. It is especially relevant in food handling and hospital environments where high standards of disinfection are required. The Biomaster antibacterial coating inhibits bacteria growth.

ffuuss one

Unique ffuuss Airhug technology and H13 HEPA filtration combine with sophisticated European design to create a highly desirable ultra-hygienic hand drying experience.

Your ultimate choice for food handling and medical environments.

Specifications

Cover	ABS - with Biomaster Silver Ions antibacterial additive
Motor	Universal with Preheat, 23,000 RPM
Power	1100W
Element	Nil, fitted with preheat
Rating	220 -240V, 5A, 50/60Hz, IPX2
Filtration	HEPA H13 - treatment with antibacterial additives
Switching	Activation with capacitive sensor
Sound Levels	70dBA @ 1.5m
Max Airflow	70 L/ s
Dimensions	635H x 322 W x 250D mm
Weight	9.2kg
Warranty	Supreme hand dryer 36 month limited warranty
Standards	Complies with New Zealand and Australian standards
